

A conservatory with Triple Shield Double Glazing is an all year room

European standards of insulation are much higher than the UK for sealed unit double glazing and you can now have the European standard of double glazing in the PVC-u frames when you choose **Ezze Conservatories**

Instead of just k-glass which meets UK standards of insulation you can upgrade free of charge to **Triple Shield** double glazing which is made with a European glass with a higher level of insulation than k-glass and which does not have the impaired vision sometimes found in k-glass.

Because the surface temperature of the glass is much higher when **Triple Shield** double glazing is specified furniture can be placed closer to the glass area with less discomfort during colder weather, which is especially important in conservatories.

The advantages of Triple Shield[®] at a glance

- Soft coated low E - argon gas filled unit having a 'u' value of 1.1
- k-glass will lose 60% more heat than Triple Shield[®] Double Glazing
- natural colour - no pronounced tint
- high light transmission
- use of solar radiation for additional heat recovery

U-value Comparison for 4 / 16 / 4

Triple Shield [®]	k-glass	Standard
1.1	1.8	2.7

The British Standards Kitemark is your Assurance of Quality

Triple Shield[®] Double Glazing is made in the UK incorporating Low E glass imported from one of Europe's leading companies in Low E glass technology. All units are dual sealed and carry the British Standard Kite Mark.
